

How NetSupport Notify can help NHS hospitals

Mass notification technology is vital for instances when all staff need to be informed simultaneously and without delay. In the healthcare sector, this is even more important because every second counts when lives are on the line.

Having an effective mass communication tool is essential to hospitals to help provide notifications and alerts in real time to aid in decision-making and to help save lives.

Overcome common communication challenges:

- ✓ Deliver time-sensitive information without using your overhead PA
- ✓ Resolve system outages and interruptions much faster (network or system failures)
- ✓ Quickly notify staff of emergencies with pre-populated hotkey combinations (e.g. fire, flood, biohazard risks, community disasters and so on)
- ✓ Colour code alerts to help staff identify the type of incident and its severity

Key features:

- ✓ Send alerts to unlimited number of users and/or sites
- ✓ Flexible delivery options and scheduling
- ✓ Full reporting and tracking
- ✓ Multi-platform support
- ✓ Customise alerts with your hospital's branding
- ✓ Apply priority levels to alerts

Creating an alert with NetSupport Notify...

Creating an alert

Create a new alert by adding a title and supporting text – or choose an existing alert to reuse.

Choose severity

Select the severity level of your alert and how it will display.

Customise

Customise the alert with your branding – add logos and choose a colour scheme.

Schedule

Choose to schedule the alert or send it immediately.

Choose recipients

Select the recipients you want your alert to be sent to.

Track

Keep track of who has received and acknowledged the alert.

Instantly improve communication by sending routine notifications or urgent alerts to unlimited computers and digital signage, across multiple sites and multiple platforms.
