

How NetSupport Notify Can Help Hospitals

Mass notification technology is vital for instances when all staff need to be informed simultaneously and without delay. In the healthcare industry, this is even more important because every second counts when lives are on the line.

Having an effective mass communication tool is essential to doctors and other hospital staff to help provide notifications and alerts in real-time to aid in decision-making and to help save lives.

Overcome common communication challenges:

- ✔ Deliver time-sensitive info without using the overhead PA (code calls)
- ✔ Resolve system outages and interruptions much faster (network or system failures)
- ✔ Quickly notify staff of emergencies with prepopulated hotkey combinations (severe weather, biohazard risks, community disasters, violence)
- ✔ Color code alerts to help staff identify the type of incident and its severity

Key features:

- ✔ Send alerts to unlimited number of users/sites
- ✔ Flexible delivery options and scheduling
- ✔ Full reporting and tracking
- ✔ Multi-platform support
- ✔ Customize alerts with your branding
- ✔ Apply priority levels to alerts

Creating an alert with NetSupport Notify...

Creating an alert

Create a new alert by adding a title and supporting text – or choose an existing alert to reuse.

Choose severity

Select how the alert will display and its severity level.

Customize

Customize the alert with your branding, add logos and choose color scheme.

Schedule

Choose to schedule the alert or send immediately.

Choose recipients

Select the recipients you want your alert to be sent to.

Track

Keep track of who has received and acknowledge the alert.

Instantly improve communication by sending routine notifications or urgent alerts to unlimited computers and digital signage, across multiple sites and multiple platforms.
